

## VIA FACSIMILE

Mr. Sirtaj Ahmed Remedial Project Manager United States Environmental Protection Agency Region 5, SR-6J 77 West Jackson Boulevard Chicago, IL 60604-3590

Subject:

Granville Solvents Site

Notice of Temporary System Shutdown Beginning April 19, 1999

Dear Mr. Ahmed:

This letter is to notify the U.S. EPA that the pump and treat system at the Granville Solvents Site is scheduled to be out of service for approximately five days beginning on April 19, 1999 for thorough inspection, cleaning, and preventive maintenance.

As a part of routine maintenance of the treatment system, an acid solution is circulated through the system on a quarterly basis to remove oxides from the internal wetted surfaces. This process works well to maintain the operating efficiency of the system, although some oxides remain on surfaces not in direct contact with the circulating solution. It is necessary to dismantle the system periodically for more thorough cleaning. The cleaning and inspection of the treatment system requires that the system be out of service for a period of approximately five days.

The Village of Granville is currently utilizing production well PW-3. A letter has been sent to the Village (attached) requesting that they operate PW-3 or PW-4 during the time the treatment system is out of service. If you have questions regarding this matter or require further explanation, please call me at 614-890-5501.

Respectfully,

METCALF & EDDY OF OHIO, INC.

## VIA FACSIMILE

Mr. Joe Hicknman Manager – Village of Granville Village Offices 141 East Broadway Granville, Ohio 43023

Subject:

Granville Solvents Site

Scheduled Temporary Shutdown of Treatment System

Dear Mr. Hickman:

As a part of routine maintenance of the treatment system at the Granville Solvents Site (GSS), an acid solution is circulated through the system on a quarterly basis to remove oxides from the internal wetted surfaces. This process works well to maintain the operating efficiency of the system, although some oxides remain on surfaces not in direct contact with the circulating solution. It is necessary to dismantle the system periodically for more thorough cleaning.

The pump and treat system at the GSS is scheduled to be out of service for approximately five days beginning on April 19, 1999 for thorough inspection, cleaning, and preventive maintenance. We have spoken with your facility personnel who indicated that the Village is currently utilizing production well PW-3 and plan to continue its use for the remainder of the month. We request that, during the time that the treatment system at the GSS is out of service, the Village not operate production well PW-2 and rely solely on PW-3 and PW-4. We shall notify you when the system is back in service.

We appreciate your continued support of our efforts at the GSS facility. If you have questions regarding this matter or require further explanation, please call me at 614-890-5501.

Respectfully,

METCALF & EDDY OF OHIO, INC.
